## DETAILED ACTION

### ***Examiner's Statement for Reasons of Allowance***

This Office Action is responsive to the claim amendments filed on 1/22/08. Claims 1, 4-12, 14-15, and 18-24 are pending. Claims 2-3, 13, and 16-17 have been canceled. Claims 20-24 are new. Claims 1, 12, and 14 have been amended.

Applicant's remarks filed in the request have been fully considered and are persuasive, thus the former 35 USC 103 rejections have been overcome.

Also, in accordance with the discussion between Examiner Rita Patel and Joanna Mason (Applicant's representative) in the Interview filed 1/15/08, amendments were made to the claim to further distinguish the nested and radially concentric features of the filters, and hereby overcoming the prior art of record.

The following is an examiner's statement of reasons for allowance: the closest prior art of record fails to teach or make obvious a filter assembly for a dishwasher having a plurality of concentrically nested filters varying in size in a radial direction, wherein a pump and sump assembly circulate water, and at least one stationary cleaning nozzle is provided at a predetermined position adjacent an outer circumference of the filter assembly facing the outermost filter of the plurality of concentrically nested filters, in combination with at least in combination with the respective claim limitations of independent claims 1 and 12.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Jacobs (US Patent No. 3,179,116) teaches a self cleaning variable filter for a dishwasher having filters aligned in a vertically parallel orientation.

McClure (US Patent No. 3,926,804) teaches a fluid filtration and sampling device for continuously performing self-cleaning fluid filtration by using a reserve fluid direction to clean the filter.

Braukmann et al. (US Patent No. 4,308,142) teaches a back-flush filtering apparatus particularly for a house water supply system, wherein a main filter is aligned with a cleaning fluid path therethrough its centerpoint.

Kloss et al. (US Patent No. 5,711,325) teaches a method of rinsing in a dishwasher by using a filter device, sump, and pump.

Anderson (Pub. No. US 2002/008068) teaches an apparatus and method for backwashing fluid filter systems wherein a filtering apparatus includes a filter chamber for admitting fluid therethrough, and it is cleaned using a backflush fluid.
